

## Five Five's

Your job is to construct the integers from one to ten using five 5's, any operation (+ - x ÷) and brackets. No double digits are allowed.

e.g. you can't do  $10 = \frac{55}{5} - \frac{5}{5}$

# Five Five's

Your job is to construct the integers from one to ten using five 5's, any operation (+ - x  $\div$ ) and brackets. No double digits are allowed.

e.g. you can't do  $10 = \frac{55}{5} - \frac{5}{5}$

Solution

There are many different possibilities —

$$1 = \frac{5}{5} + 5 \times (5 - 5)$$

$$6 = 5 + \left(\frac{5}{5}\right) \times \left(\frac{5}{5}\right)$$

$$2 = \frac{5 \times \frac{5}{5} + 5}{5}$$

$$7 = 5 + \left(\frac{5}{5}\right) + \left(\frac{5}{5}\right)$$

$$3 = \frac{5 \times 5 - 5 - 5}{5}$$

$$8 = (5 + 5) - \frac{(5 + 5)}{5}$$

$$4 = \frac{(5 + 5 + 5 + 5)}{5}$$

$$9 = \frac{(5 \times (5 + 5) - 5)}{5}$$

$$5 = \frac{\frac{5}{5} \times 5 \times 5}{5}$$

$$10 = \frac{(5 \times 5) + (5 \times 5)}{5}$$
